Loggedout.html 1 / 21

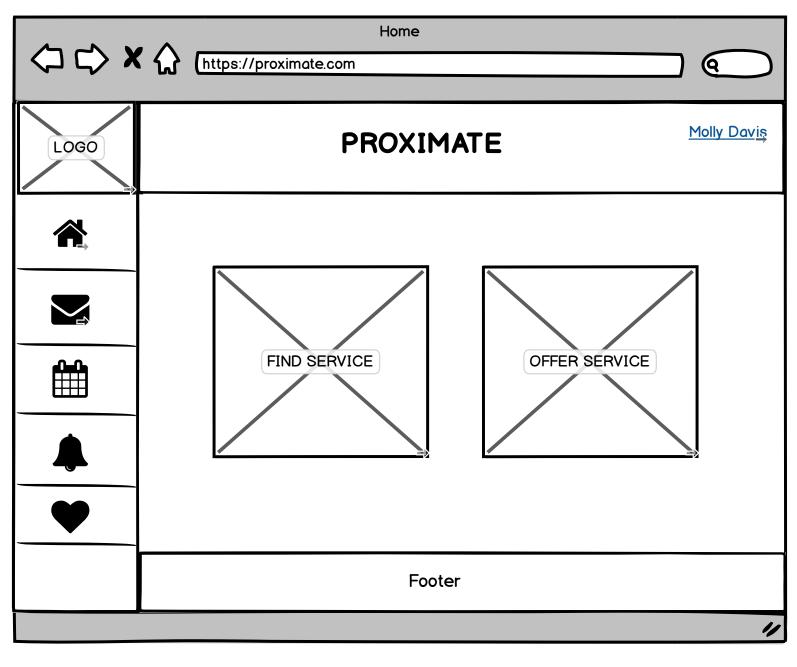

- -Home page for the new user who is not logged in.
- The home page ONLY allows for the searching of services to allow users to choose if they do want to create an account here to buy services from here.
- -After they login, they are able to buy and sell services as well as make use of all the other features provided.

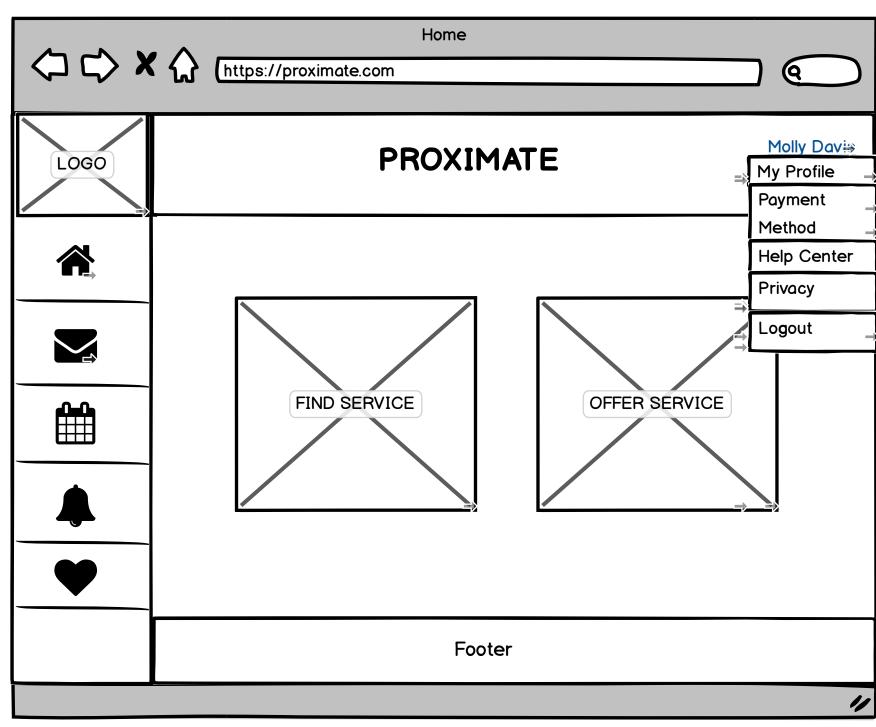

Home.html

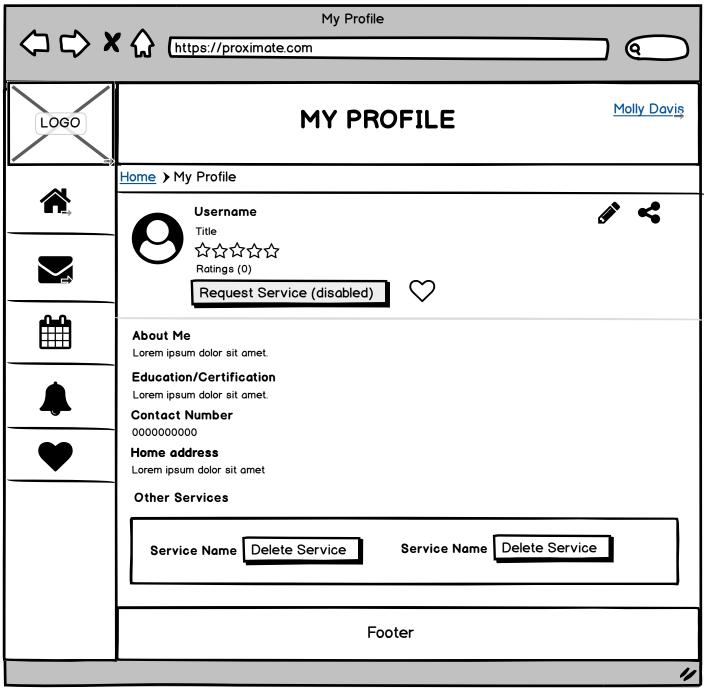

Home Page

Context: Assumes that the user is logged in.

- -Left nav bar: Shortcuts to homepage, inbox (to see chat history), schedule (to see what are the scheduled dates to receive and give services), alerts (to remind users of upcoming services as well as to rate the service provider AFTER the service has been provided) and favorites.
- -Top right link: It is a dropdown for the user to see their profile and payment options as well as logout.

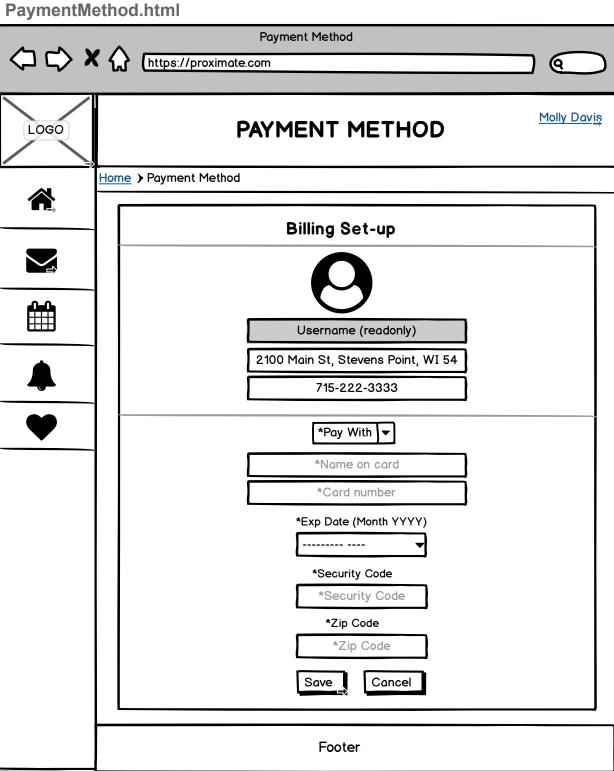

MyProfile.html 5 / 21

Profile Page

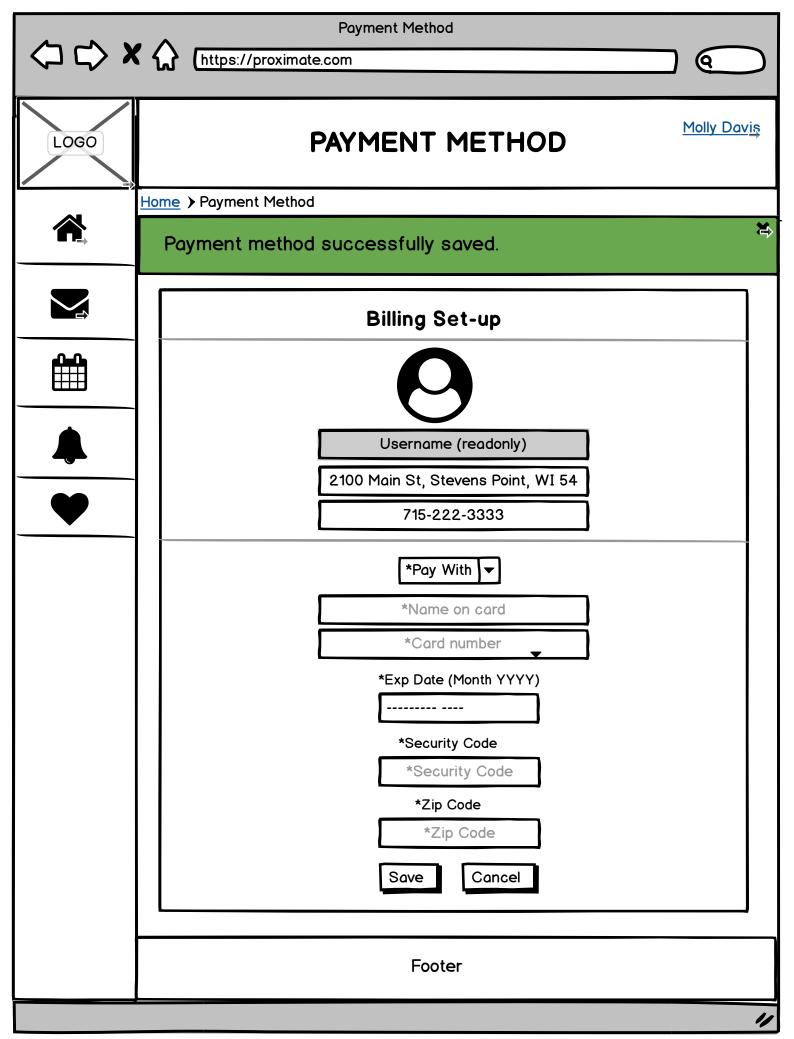

- -This page enables the user to see and update their profile picture.
- -The "Request Service" button will be disabled for the user since they don't need to request themselves for the service. It is still visible to the user to stay consistent with other service provivers' details/profile page when they see it. That way they know where to look for that button and the mental model stays consistent.
- -The share button is active for the user themselves so that they can promote others/themselves/ this platform in their social media.
- -Home address is only seen by the user since it will be essential when trying to schedule a service and only the service provider will get to see the address when hired.
- -The "Other Services" section is populated as the user posts services in this platform. It helps the user keep track of all their services as well as be able to delete any of the services if they choose to do so

6 / 21

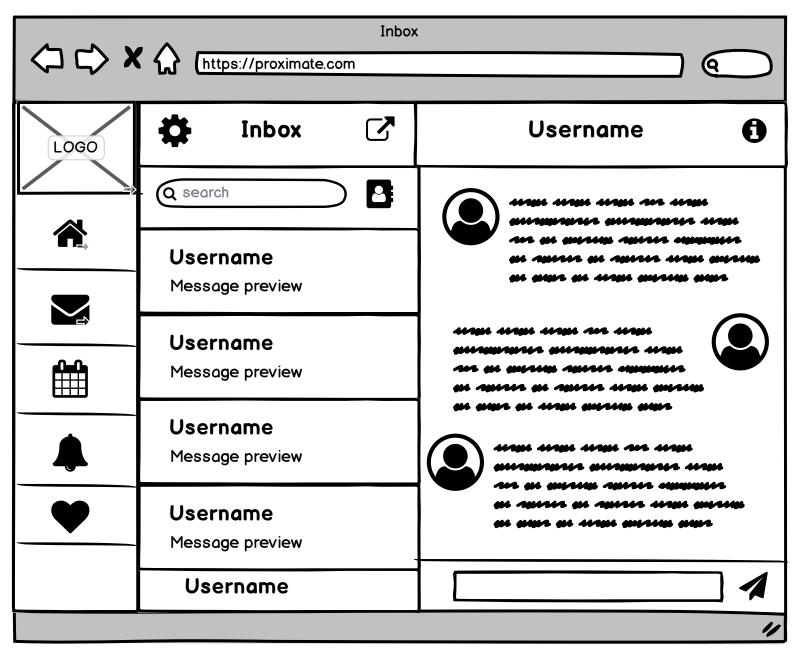

Payment Method page

- · The name is readyonly and pre-filled from the user account info.
- -Billing address and number is editable in case the user has a different card attached to a different address.
- -"Pay With" dropdown enables payment with Credit, Debit and PayPal

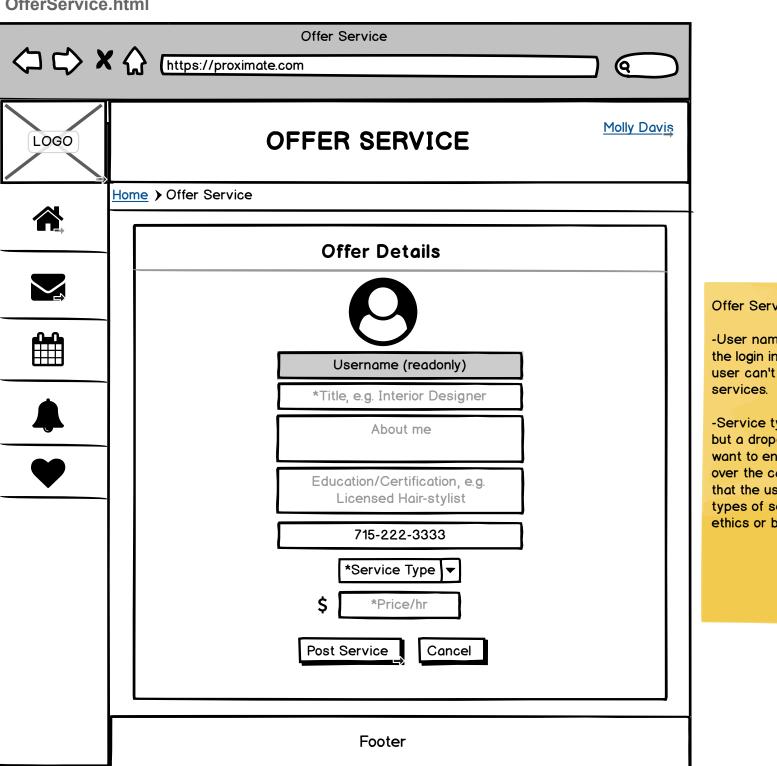

Contact.html

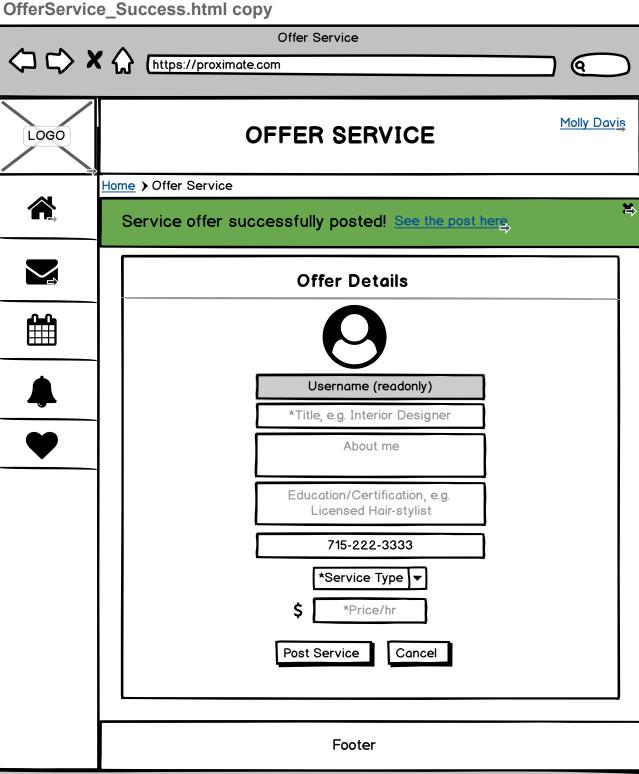

Inbox Page

-Similar to the facebook messenger UI -Helps keep track as well as communicate with service providers OfferService.html 9 / 21

Offer Service page

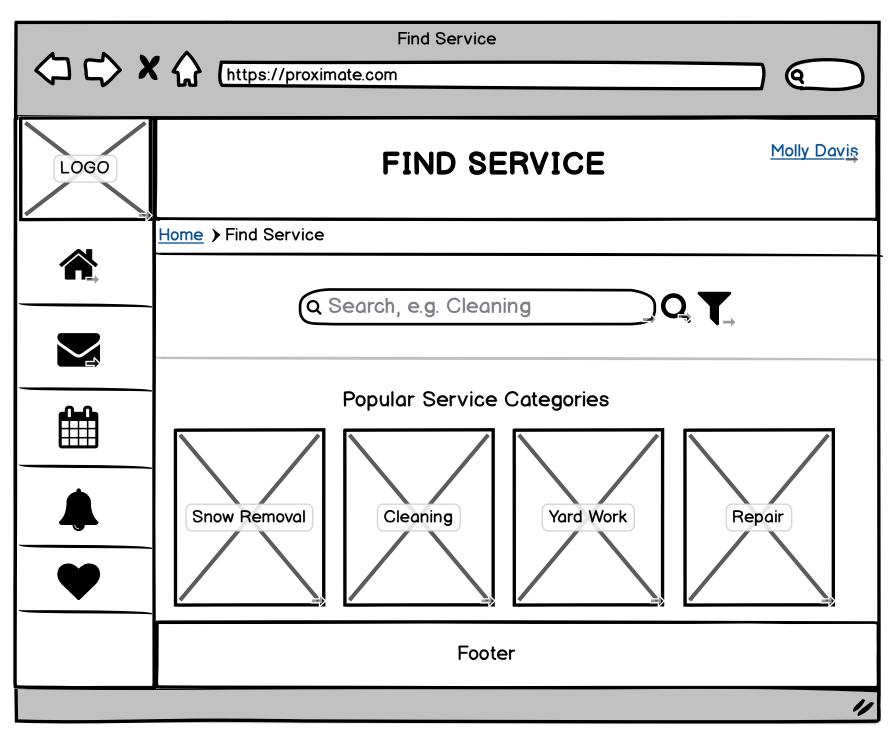

- -User name is readonly (populated with the login info) to ensure that the same user can't use fake names to provide
- -Service type is not an input text field but a dropdown/combo box because we want to ensure that we have control over the categories. It will also ensure that the user can't sell inappropriate types of services which may hurt our ethics or branding.

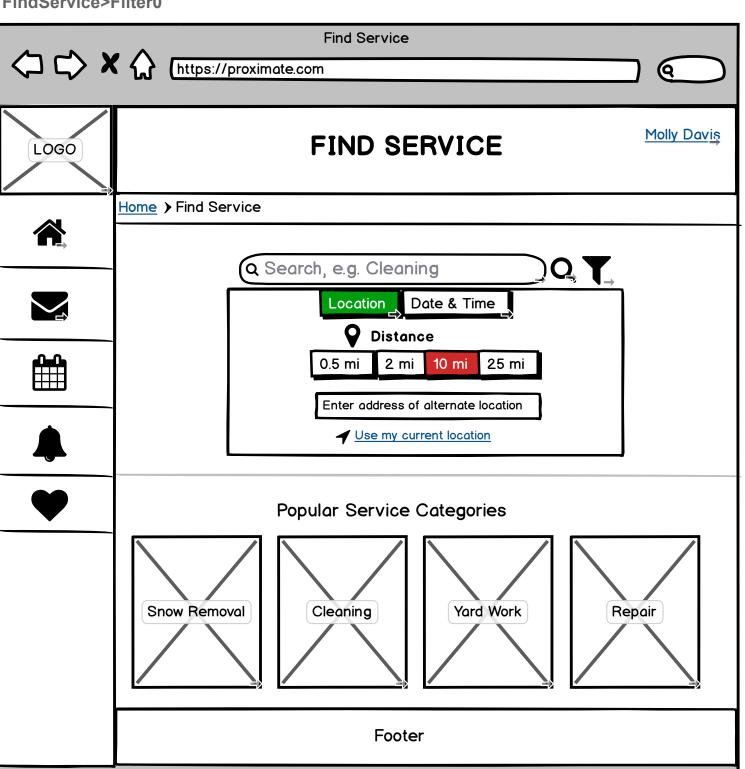

Offer Service Success Banner

- -This draws attention to the user that the service has been posted, while giving them an option to view the service by linking them back to their profile page as well as giving them the ability to undo/delete the service they created if they choose to do so.
- -The success banner appears and the form refreshes with good defaults instead of taking back to the home page after posting the service because this will help the user post multiple services from the same page.

FindService.html

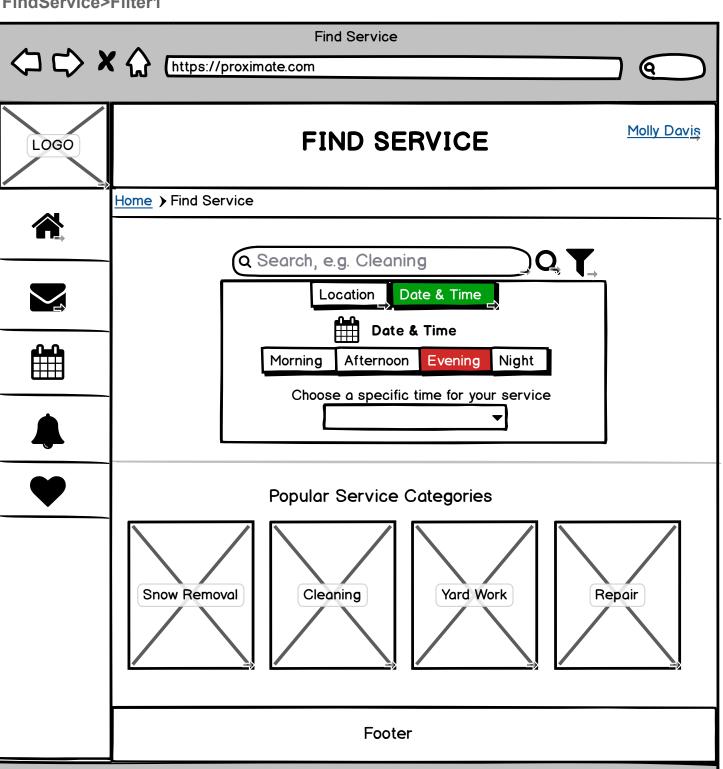

FindService>Filter0 12 / 21

Find Service - Search Filter

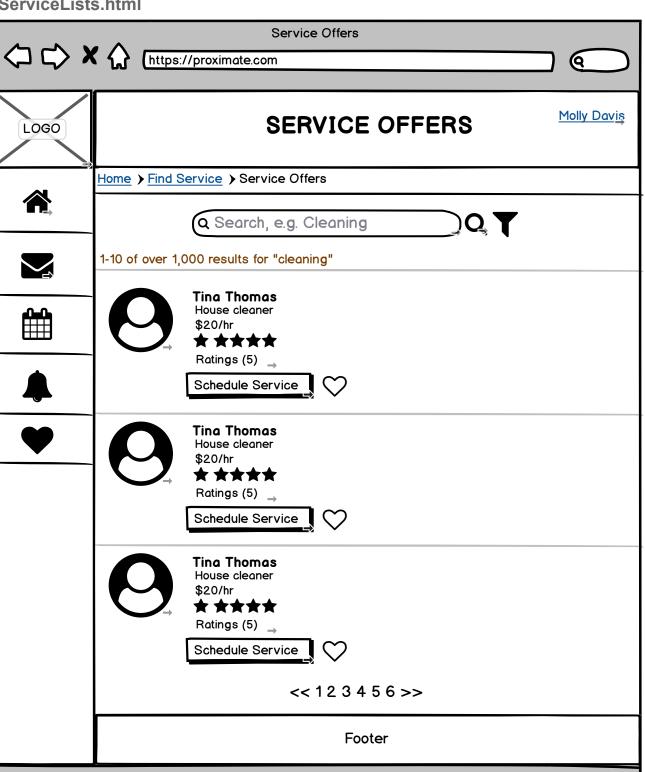

-Enables the user to narrow their search results by both location and date& time.

--Location: The user is able to narrow it by miles; around a different address as well as be able to use their current address. FindService>Filter1 13 / 21

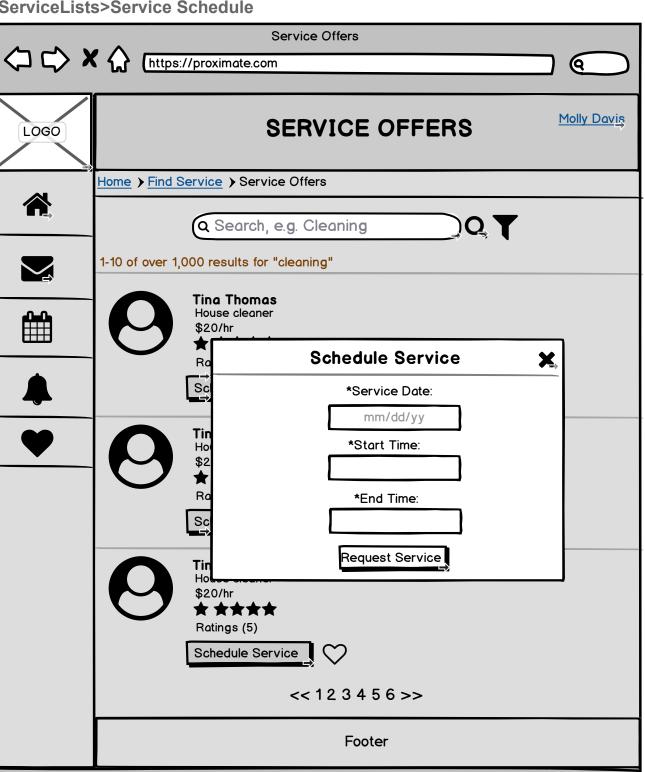

Find Service - Search Filter

--Date and Time: The user is able to narrow it by hour of the day (a generic range/set) or by specific date and time. We will match that time with the availability of the service provider's schedule and render the search results. ServiceLists.html 14 / 21

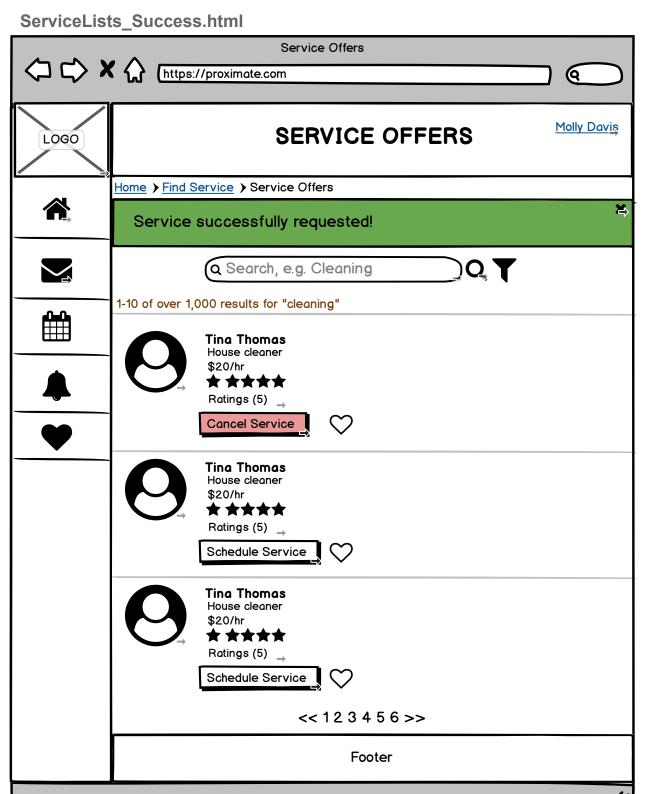

Service Offers Lists

-The user gets a quick preview about the service provider and the price for that service. ServiceLists>Service Schedule 15 / 21

Service Offers Lists

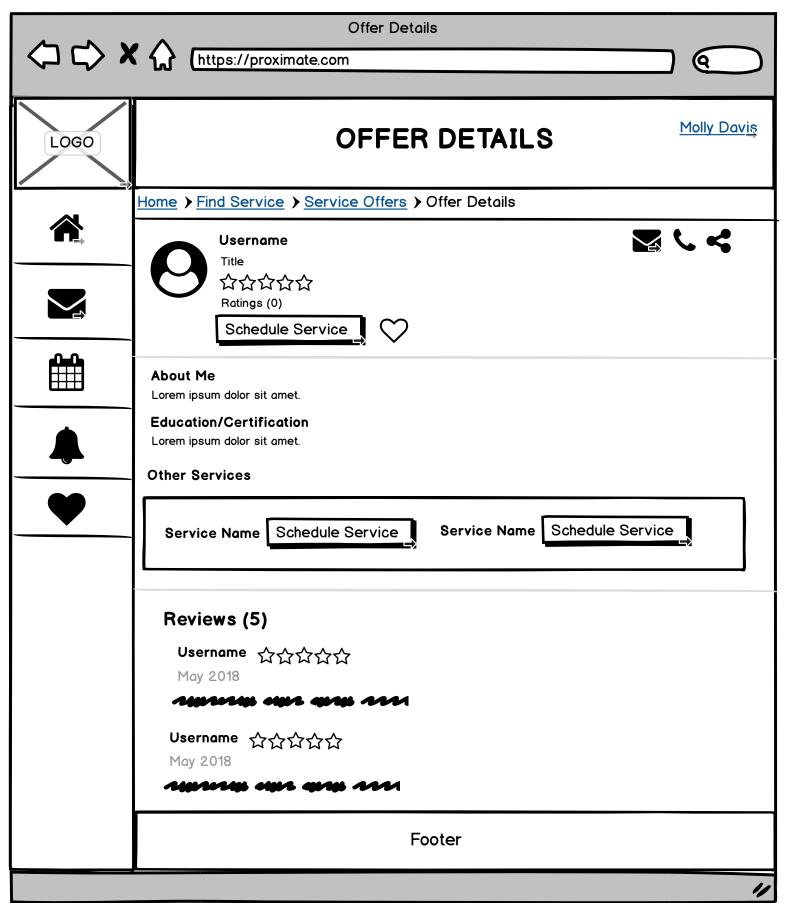

-They can schedule a service right away from this screen where they put the info in the modal or they can click onto the user image to go to the service provider's details page.

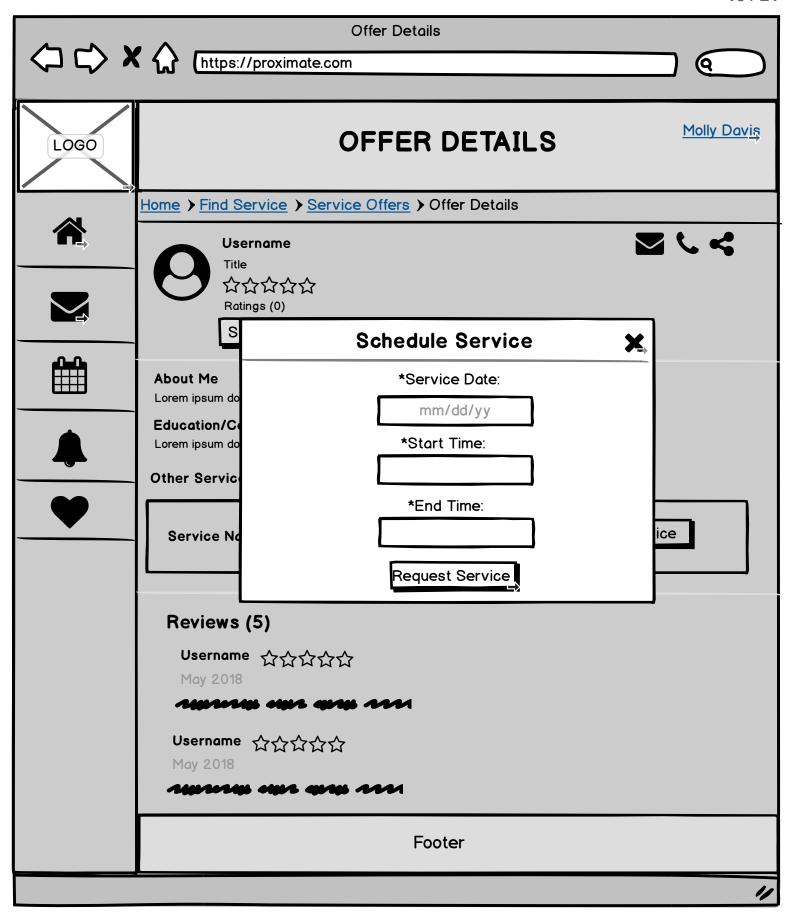

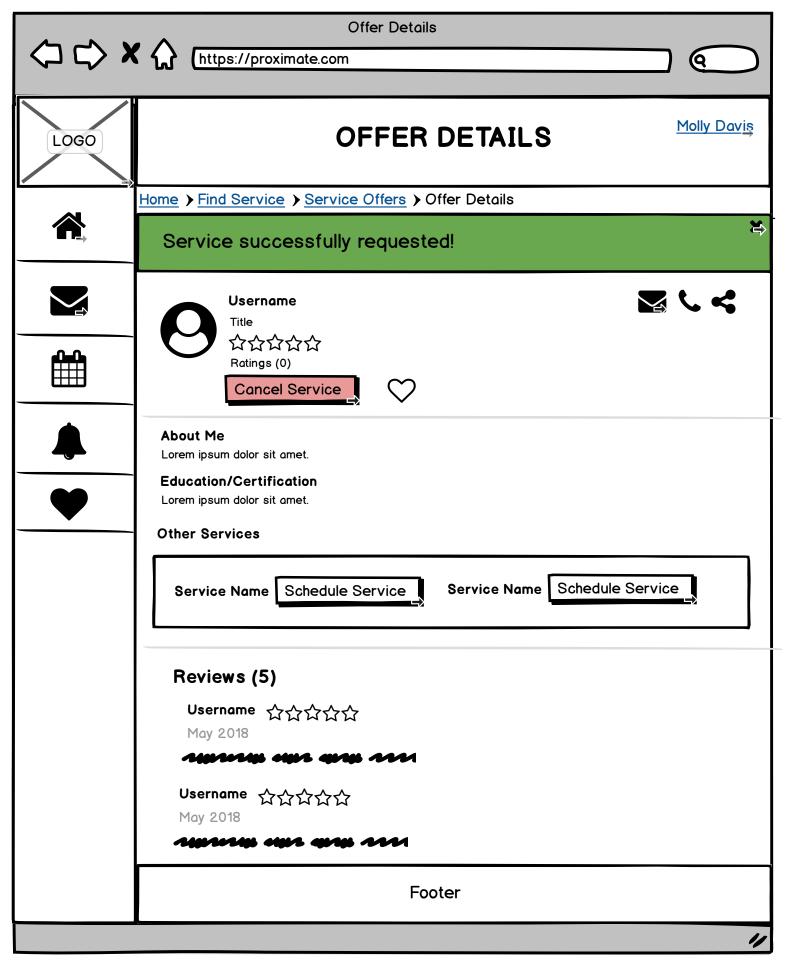

Service Offers Lists

- -Success banner helps the user know that the service has been requested.
- -The service provider's button changes to "Cancel Request" with a distinct color to ensure three things:
- (a) The user doesn't duplicate the request
- (b) The user has the option to delete the request if done unintentionally
- (c) The user knows which service provider has been booked at a glance in the list.

OfferDetails.html 17 / 21

OfferDetails>Inbox 20 / 21

Offer Details Message Feature

-The user is only allowed to see the service provider's name and not their email address and both of their emails/ usernames in the message are readonly. This prevent the user from sending message with fake names.
